Github

Project Details

X-Author Contract Management
Client: Apttus Product
Role: Staff Software Engineer

X-Author Contracts is the most advanced Dynamic Intelligent Document Technology available today. X-Author Contracts users can perform entire editing and business process right from within the document without having to go into the Apttus core application. Apttus utilizes social media enabling online collaboration. Apttus Intelligent Document Technology also provides for real time synchronization of content and data with the Apttus backend system. X-Author Contracts allows a user to greatly extend the management of the content of a document and have it fully interact with the Apttus backend structured data system.

Responsibilities:
- Discuss Sprint Planning with Product Owner and Engg.Manager for domain and business use cases.
- Design Activities like Coding Standards, Architecture, UI design etc.
- Feature development, bug fixing, writing unit test cases.
- Help Team member for Prodcut understanding and for coding.
- Presenting story demo to team and product owner, also involved in Client call for solving their difficulties for system understanding and flow.
- Re-design the application architecture with .NET Core 2.0

Environment: Angular 2, Typescript,Office-JS,OpenXML Sdk, Web-API, C#, Salesforce ,.Net core

X-Author Chatter
Client: Apttus Product
Role: Senior Software Engineer

Apttus X-Author Chatter delivers dynamic interaction between Microsoft Office, Chatter and Salesforce. Custom ribbons embedded in Microsoft Office documents enable intelligent interaction with Structured Data Systems. The technology allows for activity in a Microsoft Office document to be shared and fully recorded inside any structured database including Salesforce. Microsoft Office users do not need to go into Salesforce or Chatter to perform any tasks. All tasks, including viewing a Chatter feed, can be done from inside the Microsoft Office document. Apttus socially enables all Microsoft Office users with X-Author Chatter.

Responsibilities:
- New feature development, debugging, bug fixing, unit testing
- Development and maintenance of product
- Responsible for deliverables to client
- Client calls and presenting demo to client
- Understand the domain

Environment: ASP.NET, C#, JavaScript,Office-JS, Salesforce, WinForms

Chart Acquisition Tool (USA)
Client: Product
Role: Senior Software Engineer

CAT is windows base application; This application is basically for field reviewer who is gathering chart information from different location. Using this tool FR will manage chart of patient and upload it for WEB DU application for further

processing. This application also contain module for scan chart at Doctor's location and upload. This is offline / online base application.

Responsibilities:
- New feature development, debugging, bug fixing, unit testing, creating reports
- Guiding other team members
- Client communication
- Acquire domain knowledge

Environment: Asp.Net 4.0 C#, WEB API, Windows Forms, MoveIT Api

JFSL
Client: Leading laundry company
Role: Senior Software Engineer

JFSL is big organization of laundry. They have CDC store to collect clothes. 'MSS' is factory to wash and service providers. We have also railway module for that we collect railway materials for wash we provide different reports for that.

Responsibilities:
- Development and Bug Fixing
- Guiding other team members
- Acquire domain knowledge and share it with other team members
- Client communication

Environment: C#, MS SQL Server, ASP.Net, jQuery

Health Manager (WEB, PC)
Client: Beurer
Role: Senior Software Engineer

Health Manager is Cloud base web application; it contains different modules like User, Blood Pressure, Weight, Activity, Glucose and Dashboard etc.   The main purpose of **Health Manager** is to integrate user's data from all parts of application like (PC (desktop), I-phone) and store it on cloud. We allowed user to integrate its data from desktop, I-phone and web data in synchronize way.

Responsibilities:
- Development and testing
- Guiding other team members
- Client communication

Environment: Asp.Net 4.0, LINQ, JavaScript, J-Query, WEB API, Sql Server

ILinkCRM (Germany)
Client: I-Link Product
Role: Senior Software Engineer

ILinkCRM is CRM web application; it contains different modules like Customer, Contact Person, Project, Ticket, and Dashboard etc.   The main purpose of ILinkCRM is to integrate all its customers' data with its detail into well-organized manner, so, they can easily maintain customer relationship with their project and project related tickets.
In this application, we have used Html 5 File API for upload document via drag and drop for project and ticket module. This application of one kind of tracking of customer's project for e.g. **Mantis**.

Responsibilities:
- Development and testing and report creation
- Client communication

Environment: Asp.Net 4.0, LINQ, JavaScript, J-Query, Bing Translator API, HTML 5 (File API)

OPS ingersole, I-Partner, Sentinel Haus, DruckChemie (Germany)

Client: German Company (different)
Role: Senior Software Engineer

Above all are CRM & Web-Portal application; it contains different modules like Customer, Contact Person, Activities, Offers, Marketing data, Forum, Analysis Services, Dashboard etc.   The main purpose of all this application is to integrate all its customer data with its detail into well-organized manner, so, they can easily maintain customer relationship, and have different rights to share other customers. Analysis service module contain all reports of customer with PDF and Excel format created using Sql server reporting.

In I-Partner application, we have implemented GMAP for identify nearby Customer for article purchase using its city and distance wise. System also have dynamic slider for Customer profile and project Gallery according to data uploaded for respective features.

Responsibilities:
- Requirement gathering, Development, testing and deployment
- Guiding other team members
- Client communication

Environment: Asp.Net 4.0, LINQ, JavaScript, J-Query, Bing Translator API, HTML 5 (File API)

Academic Project:

Project Name	Technology	Team Size	Organization	Duration # Months
OPS ingersole	Asp.Net 4.0, LINQ, JavaScript, J-Query, XML, SQL Server	2	I-Link Infosoft (Guj) Pvt. Ltd.	4
HR Intranet	ASP.NET, JavaScript, SQL Server	2	Core Soft solution Pvt.Ltd.	3
DMS	ASP.NET, JavaScript, AJAX, SQL Server	3	Multivision TechnoSys.	6

Achievements:
- ✓ Organize 1st Technical event TECHNOMANTRA-09 at K.S Gujarat University in 2009.
- ✓ Cleared **TCS C2C NET** examination in 2010.
